In business, understanding the numbers is critical. It can make the difference between being in business or not. Developing a financial plan for the future and understanding finance terminology can take you from fearing the numbers to becoming a competent business owner. Every business has risk and identifying your risk factors provides an opportunity to create a contingency or plan to mitigate those situations should they occur. An entrepreneur that plans for risk management or identifies contingencies will often survive a critical time in their business.

What Will Participants Learn?

- The 5 Factors of Financial Planning
